SUMMARY

Frontend Developer with 2.5 years building and maintaining a production React website solo - from component architecture and state management (Redux Toolkit/Zustand) to shipping REST API integrations. Comfortable taking a feature from requirement to live deployment on my own.

SKILLS

Frontend: JavaScript (ES6+), React.js, React Router, HTML5, CSS3, Tailwind CSS

State & Forms: Redux Toolkit, Zustand, React Hook Form

Platforms & APIs: Appwrite, REST API Integration, TinyMCE

Tools: Git, GitHub, Vercel, Netlify

EXPERIENCE

Web Developer | Punyoday Trust

July 2023 – Jan 2026

Website Development & Maintenance

React • REST APIs

- Independently owned end-to-end maintenance and troubleshooting of a production React website for 2.5 years, including building form-based data collection workflows used for 15+ events and organizational data.
- Shipped 20+ feature updates and content changes to the live site, working directly from organizational requirements without a dedicated PM/spec process.
- Integrated EmailJS to automate email delivery on form submissions, including auto-reply confirmations so users received instant acknowledgment.

Frontend Developer Intern | iNeuron

Jan 18 – Feb 22, 2023

- **The Fade (E-commerce Platform) – Solo Project** | *React JS, Zustand, React Router*
- Built a fully responsive e-commerce frontend solo — fetched and rendered categories and products from FakeStoreAPI, with product listing, detail, and cart flows using React and Tailwind CSS
- Managed cart and checkout state with Zustand for predictable, bug-free UI updates across the shopping flow
- Built a single reusable product component that handled URL search parameters and dynamic data loading for all category and product views, rather than duplicating
- **ResumeHub (Resume Builder) – Team Project** | *React, Zustand, Tailwind CSS, REST APIs*
- Built the UI and page structure for a resume builder app in a 2-person team, using React, Zustand, and Tailwind CSS.
- Built dynamic forms that captured user input and auto-populated selected resume templates in real time, so users could fill a form and generate a formatted resume instantly.

PROJECTS

Megablog – Blog Platform | *React, Appwrite, Redux Toolkit, React Hook Form, Tailwind CSS, TinyMCE*

- Built the full user flow - signup/login via Appwrite auth, browse all posts, create or edit your own through a shared PostForm, and manage everything from a personal dashboard scoped to your account.
- Architected 12+ reusable components - including a single PostForm component reused for both post creation and editing, avoiding duplicate logic.
- Implemented ownership-based access control across the app - filtering the dashboard to each user's own posts and gating Edit/Delete visibility - by comparing post author ID to the authenticated session user ID.
- Added a rich text editor (TinyMCE) with image uploads and dynamic slug generation for clean, shareable post URLs."

TaskFlow – Productivity Manager | *React, Redux Toolkit, Tailwind CSS*

- Built a task manager with 3 categorized lists, 3 priority levels, and due-date tracking, filterable across All/Active/Completed views.
- Structured centralized state with Redux Toolkit for predictable updates across task creation, editing, deletion, and status changes.
- Built a live dashboard showing 4 real-time stats (total, completed, pending, high-priority) and a calculated completion-rate percentage, plus localStorage persistence and light/dark mode.

EDUCATION

Bachelor of Computer Applications | Lovely Professional University

Diploma in Computer Science | Allahabad College of Engineering & Management
